

HAUL OUT REMINDERS

HAUL OUT 2015

Make sure your cradle is set up properly, well in advance of Haul Out Day

Have tools or wood ready if you need to adjust your cradle

Are the pads in the right locations?

Do you have two tag lines tied securely at the bow and stern and are they long enough (the boats are 20' + in the air)?

Pay attention to when your boat is being hauled. Watch the white board on the deck for updates

Ensure the sling positions are marked clearly on the deck before you move your boat to the lift point

Stay out of the way of the haul out crew as boats are lifted and placed in the cradles

Don't park in the No Parking Zone on Heritage or in the Club's parking lot until the crane has left

Help out our new members as they might not have done this before or our older members as they might have forgotten :)

Looking forward to a smooth haul out and to keeping costs down. Thanks for your help !
